D&C Engineers' soil stabilisation plant

A new addition to our plant build capabilities...

...this small mobile soil stabilisation plant gives you an output from as low as 20m³ up to 100m³ per hour.

It allows you to mix soil with cement, lime or the powder of your choosing, avoiding airborne dust found when ground layering. You can also introduce any additives you need at the mixing stage. Treated soil can be discharged to a stockpile or directly into dump trucks. The soil stabilisation plant needs no special foundations, just hard-level standing, and we can get you up and running with the unit in one day.
